

INTERNATIONAL CONFERENCE: **FUTURE WITH EMAS**

November 6-7, 2025, Warsaw, Poland

Conference Goal:

To demonstrate the potential of **integrating EMAS with Chemical Risk Management, Environmental Reporting or Industrial Emissions Directive** to support sustainable development, regulatory compliance, and added organizational value. Many organizations still consider the above as separate. Environmental reporting is normally yet another functionality.

This conference aims to show how these systems can be practically integrated without duplicating efforts.

Rationale for EMAS and CRM, ESG or IED in a Joint Conference Format

Thirty years ago, the Eco-Management and Audit Scheme (EMAS) was launched as an innovative, voluntary instrument designed for Europe's most environmentally conscious and proactive organizations in Europe. Since then, economic, political, and social conditions have evolved considerably, calling for a reassessment of the Scheme's role in today's context.

Today's environmental and safety challenges demand an integrated approach that unites environmental responsibility with complementary regulatory and management tools. EMAS, Chemical Risk Management, Sustainability Reporting, and the Industrial Emissions Directive share a common foundation: systematic methods, continuous improvement, and strict legal compliance.

Addressing these frameworks together within a single international conference is not only a logical response to global developments - it has become an essential step forward.
